

Route2Zero 2.1

Prototype Demonstration

A live decision workflow: screen 1,522 corridors, show what is known, and prioritize the evidence needed for a defensible Phase-1 pilot.

BUILD	r2z-d4c8d4cc709a
MODEL	service-v1-266e0b1d
SCENARIO	scn-e0f12f397e
GENERATED	24 Aug 2026 · 16:13 UTC

Values shown are generated from the linked build and scenario — not manually entered.

DEMO DECISION

What this demonstration will prove.

Which corridors remain strong when climate, equity, charging, operator evidence, and uncertainty are tested together?

Scenario [scn-e0f12f397e](#)

SYSTEM OVERVIEW

The final city decision cockpit.

1 1,522 screened · 20 dated matches

2 Scenario and build state

3 Map, Route Lens, feasibility

DECISION

9 robust-priority routes

ML estimates - Models quantify - People decide

ML-assisted corridor intelligence · climate-impact scenarios · human-controlled policy

CURRENT-EVIDENCE VALIDATION

A validated corridor shows its source, review date, and observed geometry.

FLAGSHIP ROUTE LENS

Flagship corridor: Francisco Homes–Cubao.

The machine-learning layer produces a real route-level estimate.

ML: 6,657

NO RANK LEAKAGE

CORRIDOR TYPOLOGY

The selected route is compared against similar corridors.

CLIMATE + ENERGY

Lead with the base climate case; keep the bounded risk beside it.

EQUITY + ACCESSIBILITY

The climate recommendation is tested against who and where it serves.

FEASIBILITY + MODEL RESTRAINT

Feasibility is visible as a proxy — never disguised as a budget.

EVIDENCE CONFIDENCE

Priority, evidence quality, and stability are different questions.

5,000-SCENARIO MONTE CARLO

Does the recommendation survive changing policy priorities?

YOUR PLANNING QUESTION

What evidence should the city request before piloting this route?

Generate evidence brief

SCENARIO COMPARISON

A city can change priorities without hiding the trade-off.

PHASE-1 PORTFOLIO INPUTS

Now move from ranking to a city validation program.

1

Maximum eight corridors

07

Philcoa

San Jose del Monte · Grade C

71.6

08

Bagong Silang – Philcoa via Commonwealth Ave., Maligaya Park

Caloocan · Grade C

70.3

equity and city-coverage constraints

•

LTFRB_PUJ2084 · not selected after evidence, equity and city-coverage constraints

2

Evidence and equity constraints

Active constraints

•

maximum 8 corridors

•

maximum 2 corridors per primary city

•

maximum 1 route direction per normalized corridor

•

minimum equity score 40

•

minimum evidence grade C

CORRIDOR ACTION QUEUE

Top routes under the active policy lens

Select a route to inspect it

RANK	ROUTE	CITY	PRIORITY	EVIDENCE	CLIMATE RANGE	ROBUSTNESS
#1	Francisco Homes – Cubao LTFRB_PUJ1353	San Jose del Monte	79.1	C · 38.3	+365	
#2	Dasmarinas Resettlement Area – Baclaran via Coastal Rd.	Pasay	76.9	C · 38.3	+365-1,104 to +3,004	ROBUST PRIORITY

3

Cost is visible, not optimized

OPTIMIZED RESULT

The optimized portfolio is not simply the top eight routes.

PLANNING & EVIDENCE ASSISTANT

AI explains the evidence and tells the city what to verify next.

Evidence-backed answer

YOUR PLANNING QUESTION

What evidence should the city request before
piloting this route?

Generate evidence brief

3
Scenario + source + fallback status

REPRODUCIBILITY + CLOSE

The decision can be reproduced, exported, challenged, and rerun.

Transparent enough to challenge.

Open only what you need. The dashboard stays focused while assumptions, provenance and limitations remain one click away.

01 How to use Route2Zero

02 Why this decision matters

03 Claims, assumptions and safeguards

ML service intelligence

Predicts historic service activity for anomaly detection and gap analysis; it is not ridership and is not used when the direct historic proxy is available.

Climate scenarios

Low/base/high net CO₂e and energy results are deterministic scenarios, not measured reductions.

Equity

Uses population exposure only. No validated informal-settlement, socioeconomic or accessibility-gap layer is claimed.

Charging

Mapped proximity is contextual evidence, not proof of utility capacity, interconnection or site control.

Operator

A neutral prior remains until consent-based cooperative evidence is collected.

Governance

ML estimates. Deterministic models quantify. Policy weights remain human-controlled. The LLM explains and triages evidence; it never silently edits scores or choices.

SOURCE EVIDENCE → ML → CLIMATE / EQUITY / READINESS → CONFIDENCE → POLICY → SENSITIVITY → PORTFOLIO → VALIDATION

Route2Zero is not asking the city to trust one score. It shows what remains true when assumptions are challenged.
