

Route2Zero 2.0

Prototype Demonstration

From 1,522 route records to a robust Phase-1 electrification portfolio.

BUILD	r2z-16690ccbe328
MODEL	service-v1-266e0b1d
SCENARIO	scn-c46e1d86c1
GENERATED	20 Aug 2026 · 04:47 UTC

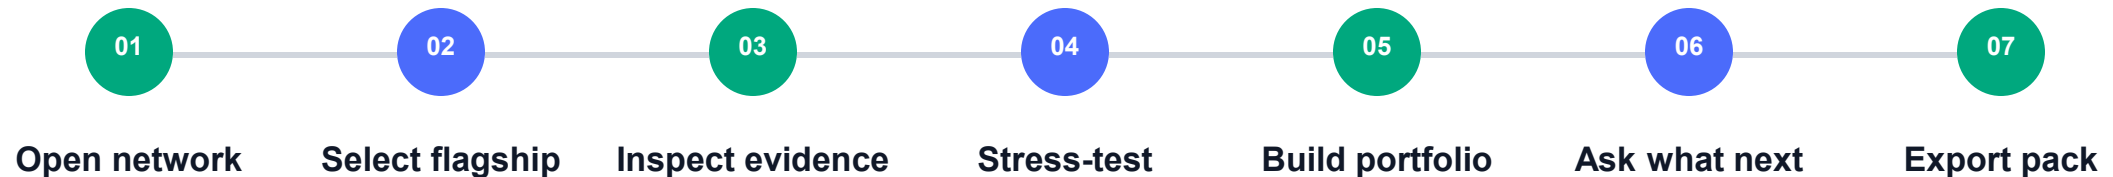

Values shown are generated from the linked build and scenario — not manually entered.

DEMO DECISION

What this demonstration will prove.

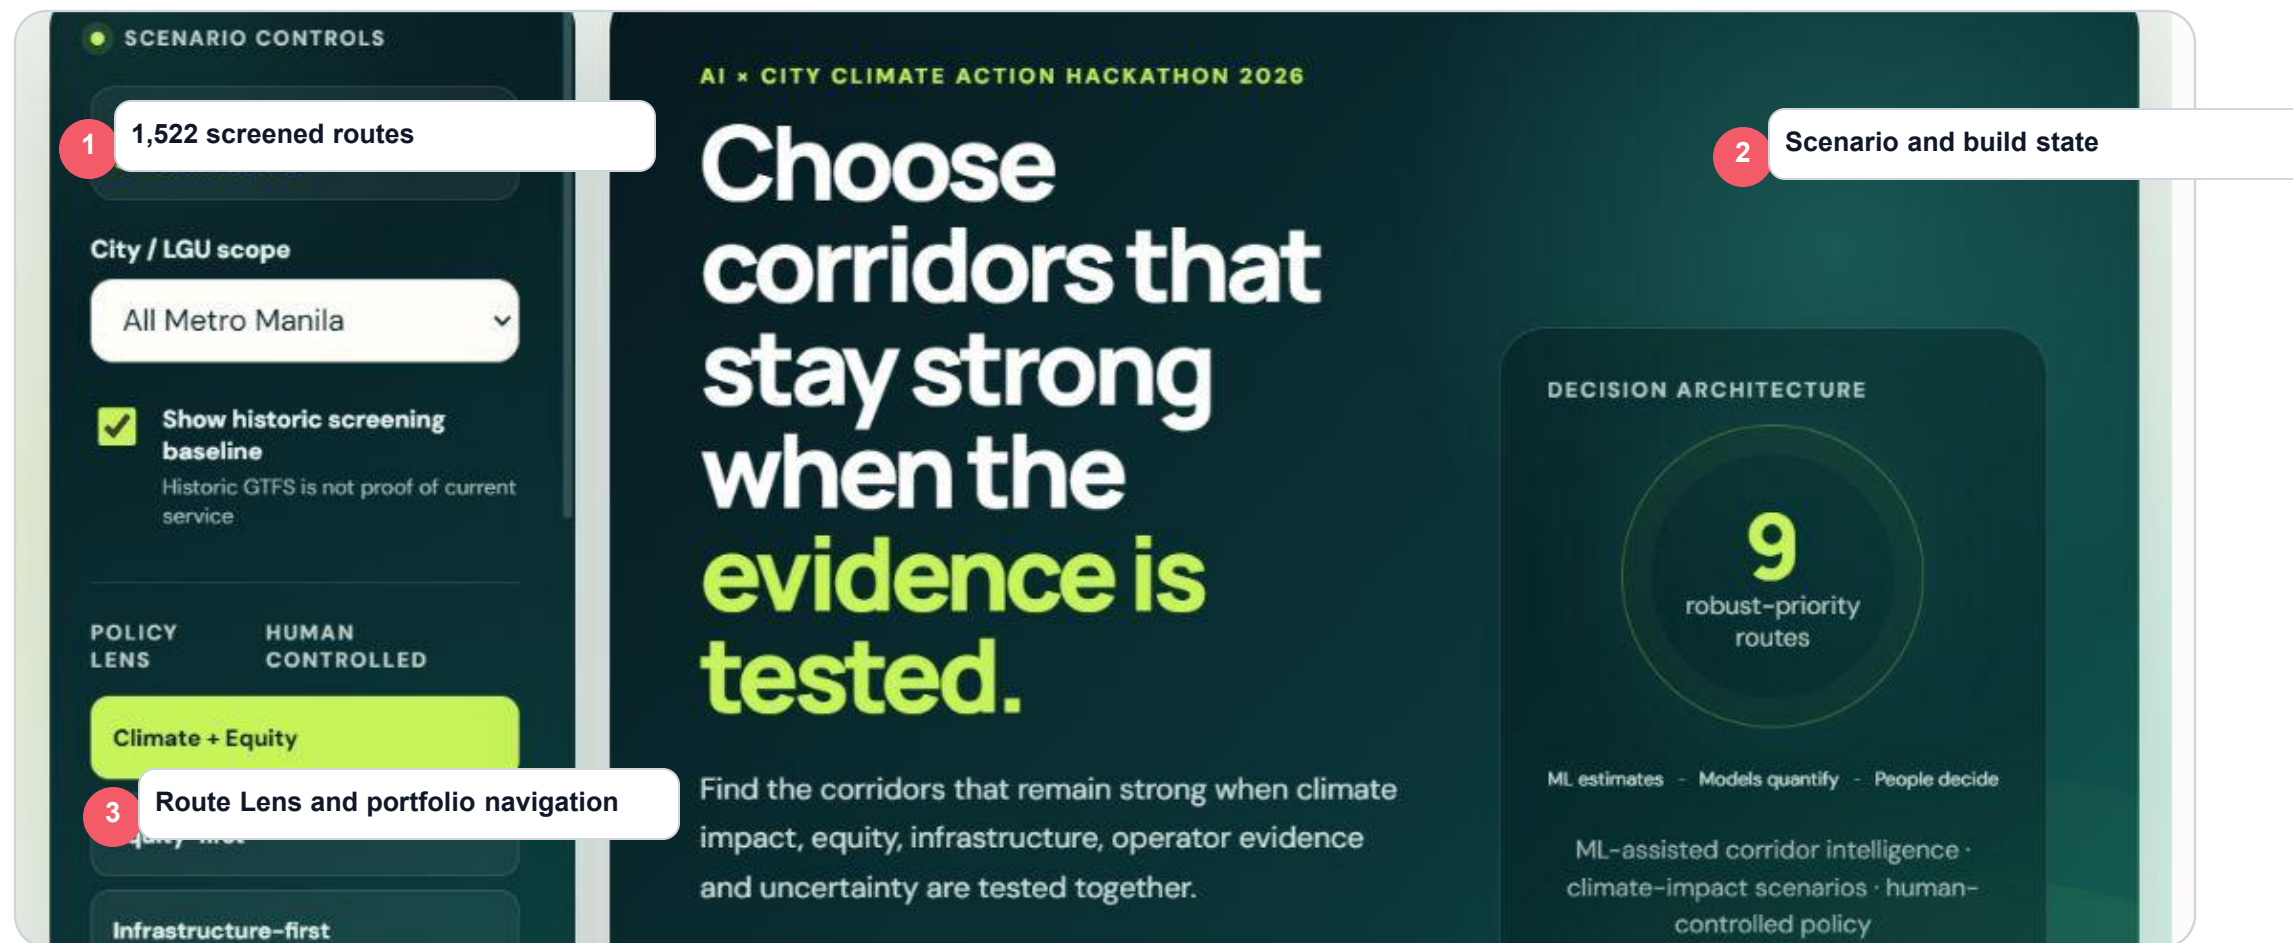

Which corridors remain strong when climate, equity, charging, operator evidence, and uncertainty are tested together?

Scenario scn-c46e1d86c1

SYSTEM OVERVIEW

The final city decision cockpit.

SOURCE + VALIDATION STATE

The system knows what is current, historic, estimated, and missing.

The screenshot shows the Route2Zero dashboard. On the left is a dark sidebar with 'SCENARIO CONTROLS' at the top. Below it is a 'LIVE SCENARIOS' section with a red circle '1' and the text 'Claim-status legend'. Further down is a 'City / LGU scope' section with a dropdown menu set to 'All Metro Manila'. Below that is a checked checkbox for 'Show historic screening baseline' with a note 'Historic GTFS is not proof of current service'. At the bottom of the sidebar are 'POLICY LENS' and 'HUMAN CONTROLLED' sections. Under 'POLICY LENS', 'Climate + Equity' is highlighted in yellow, with a red circle '3' and the text '0 current validations is explicit' next to it. Below it are 'Equity-first' and 'Infrastructure-first' options. The main content area has a header '1,359-place swing'. Below that is a 'METHOD & SOURCES' section with the heading 'Transparent enough to challenge.' and a paragraph: 'Open only what you need. The dashboard stays focused while assumptions, provenance and limitations remain one click away.' To the right of this is a list of four expandable items: '01 How to use Route2Zero', '02 Why this decision matters', '03 Claims, assumptions and safeguards', and '04 Sources, models and pipeline health'. A red circle '2' and the text 'Source and build manifest' are positioned above this list.

2 Planning geometry + source

Francisco Homes - Cubao is #1 under scenario scn-c46e1d86c1, with a priority score of 80.0, evidence grade C, and 100% top-10 frequency across 5,000 tested policy scenarios. Validate climate assumptions first; the tested range moves the route by up to 1395 places.

Francisco Homes - Cubao
LTFRB_PUJ1353 · San Jose del Monte · Quezon City · 31.0 km

PRIORITY DERIVED
80.0/100

EQUITY PROXY
77.4/100

POLICY LENS **HUMAN CONTROLLED**
Climate + Equity
Equity-first
Infrastructure-first

ML SERVICE INTENSITY

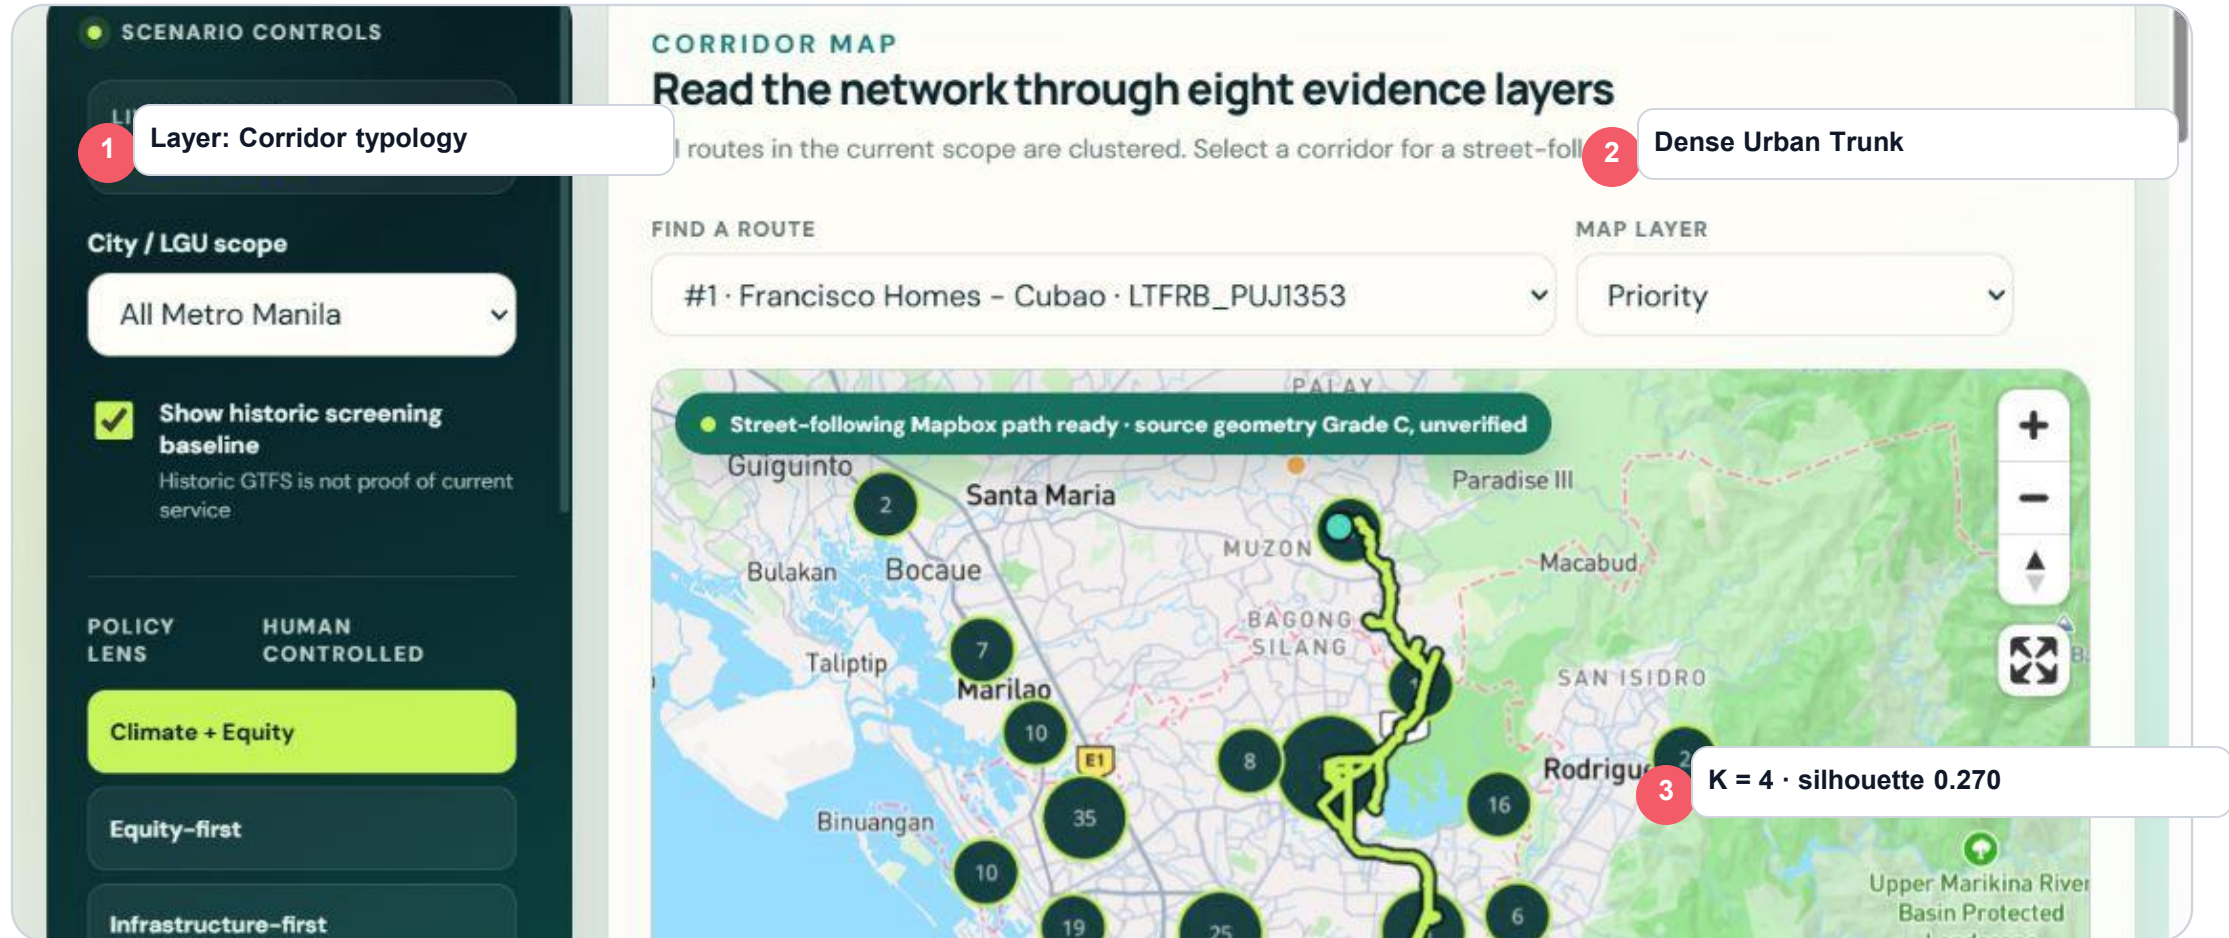

The machine-learning layer produces a real route-level estimate.

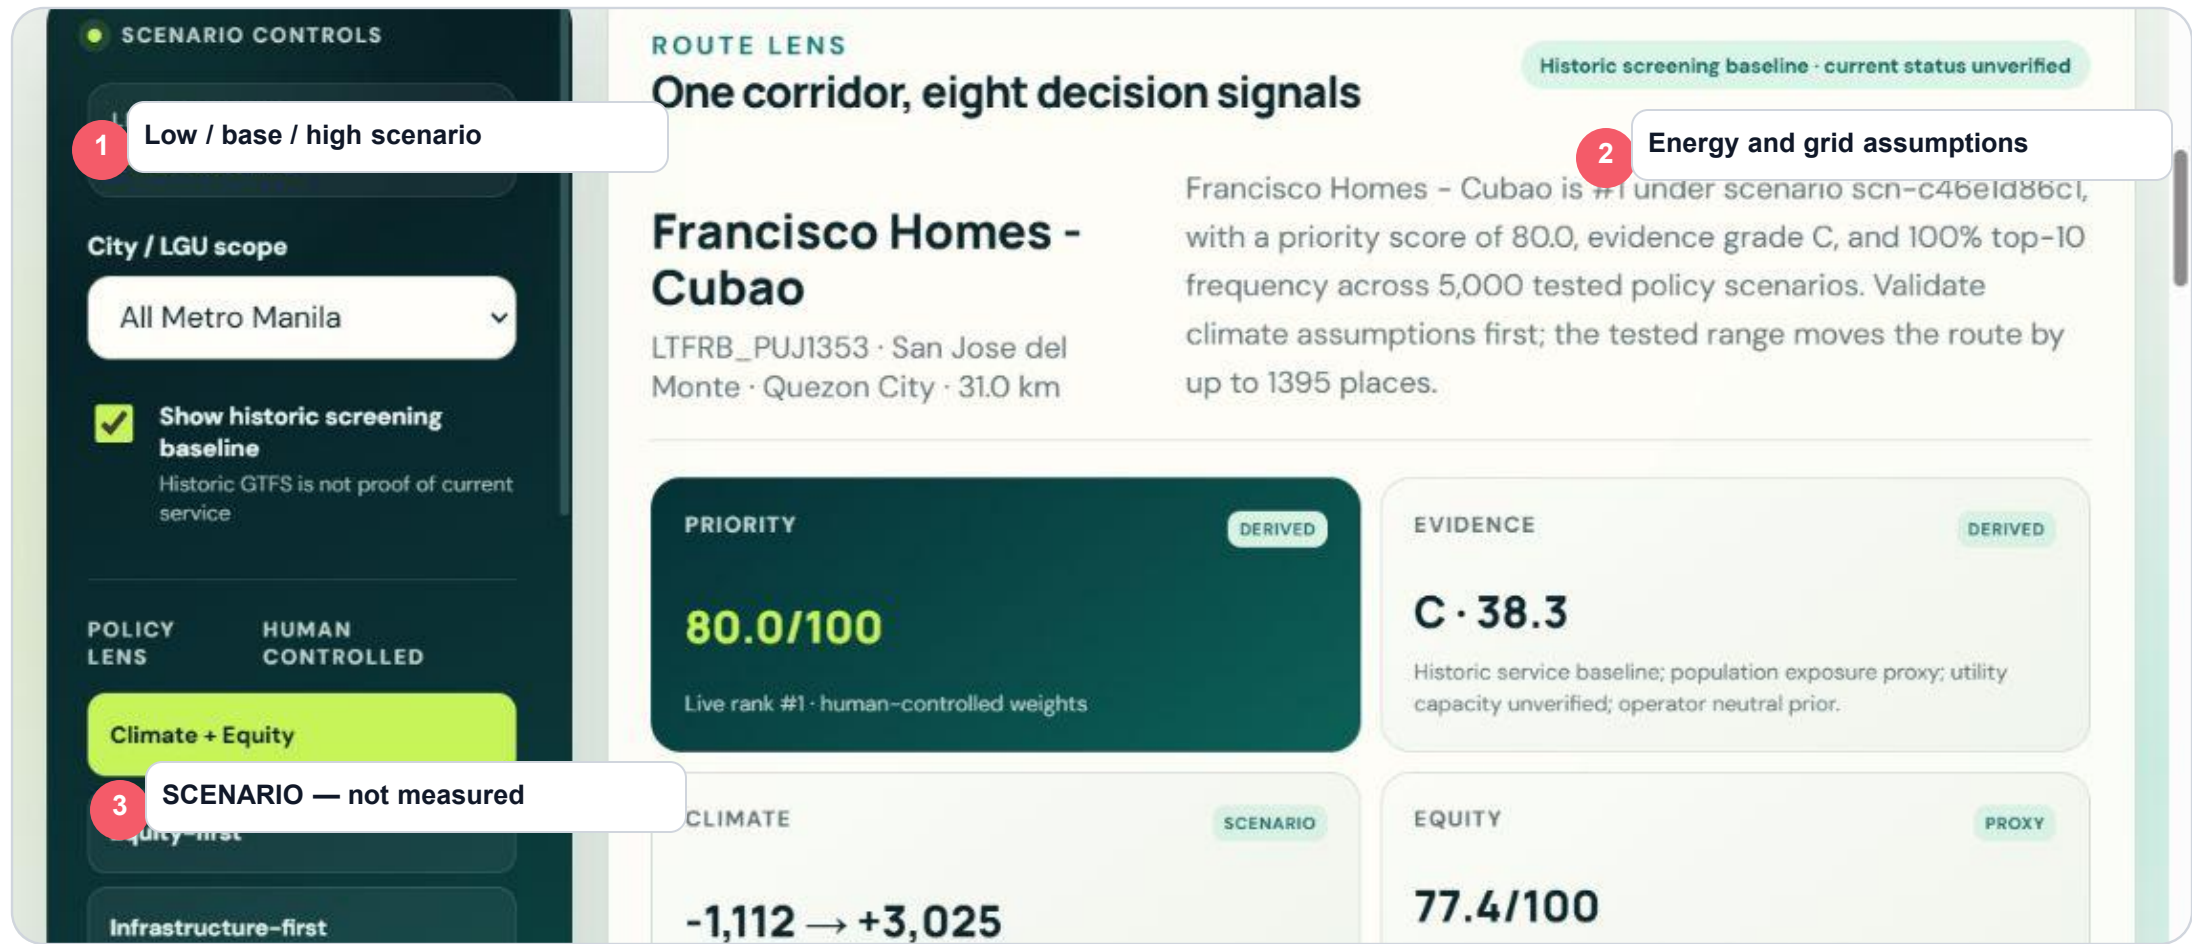

Historic evidence used; the ML estimate is comparison-only for this route.

CORRIDOR TYPOLOGY

The selected route is compared against similar corridors.

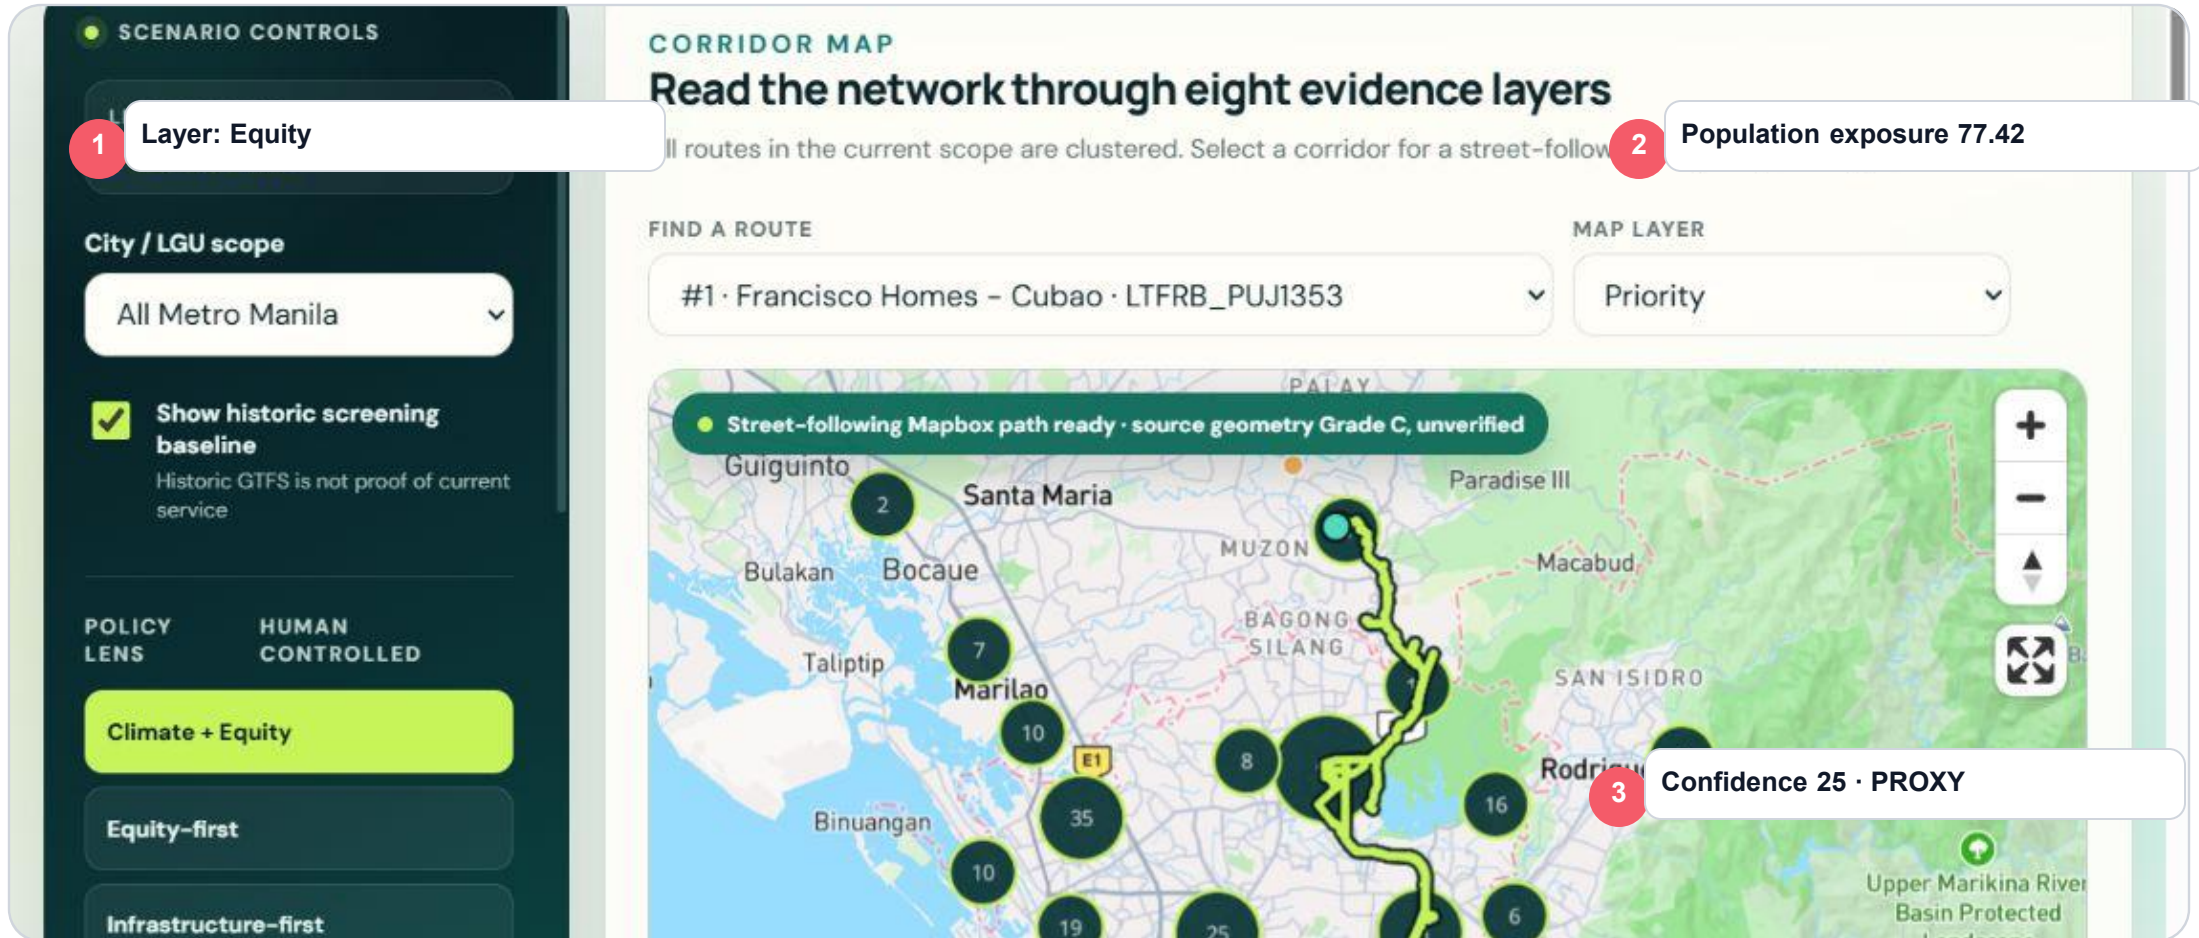

From service activity to an electrification-impact range.

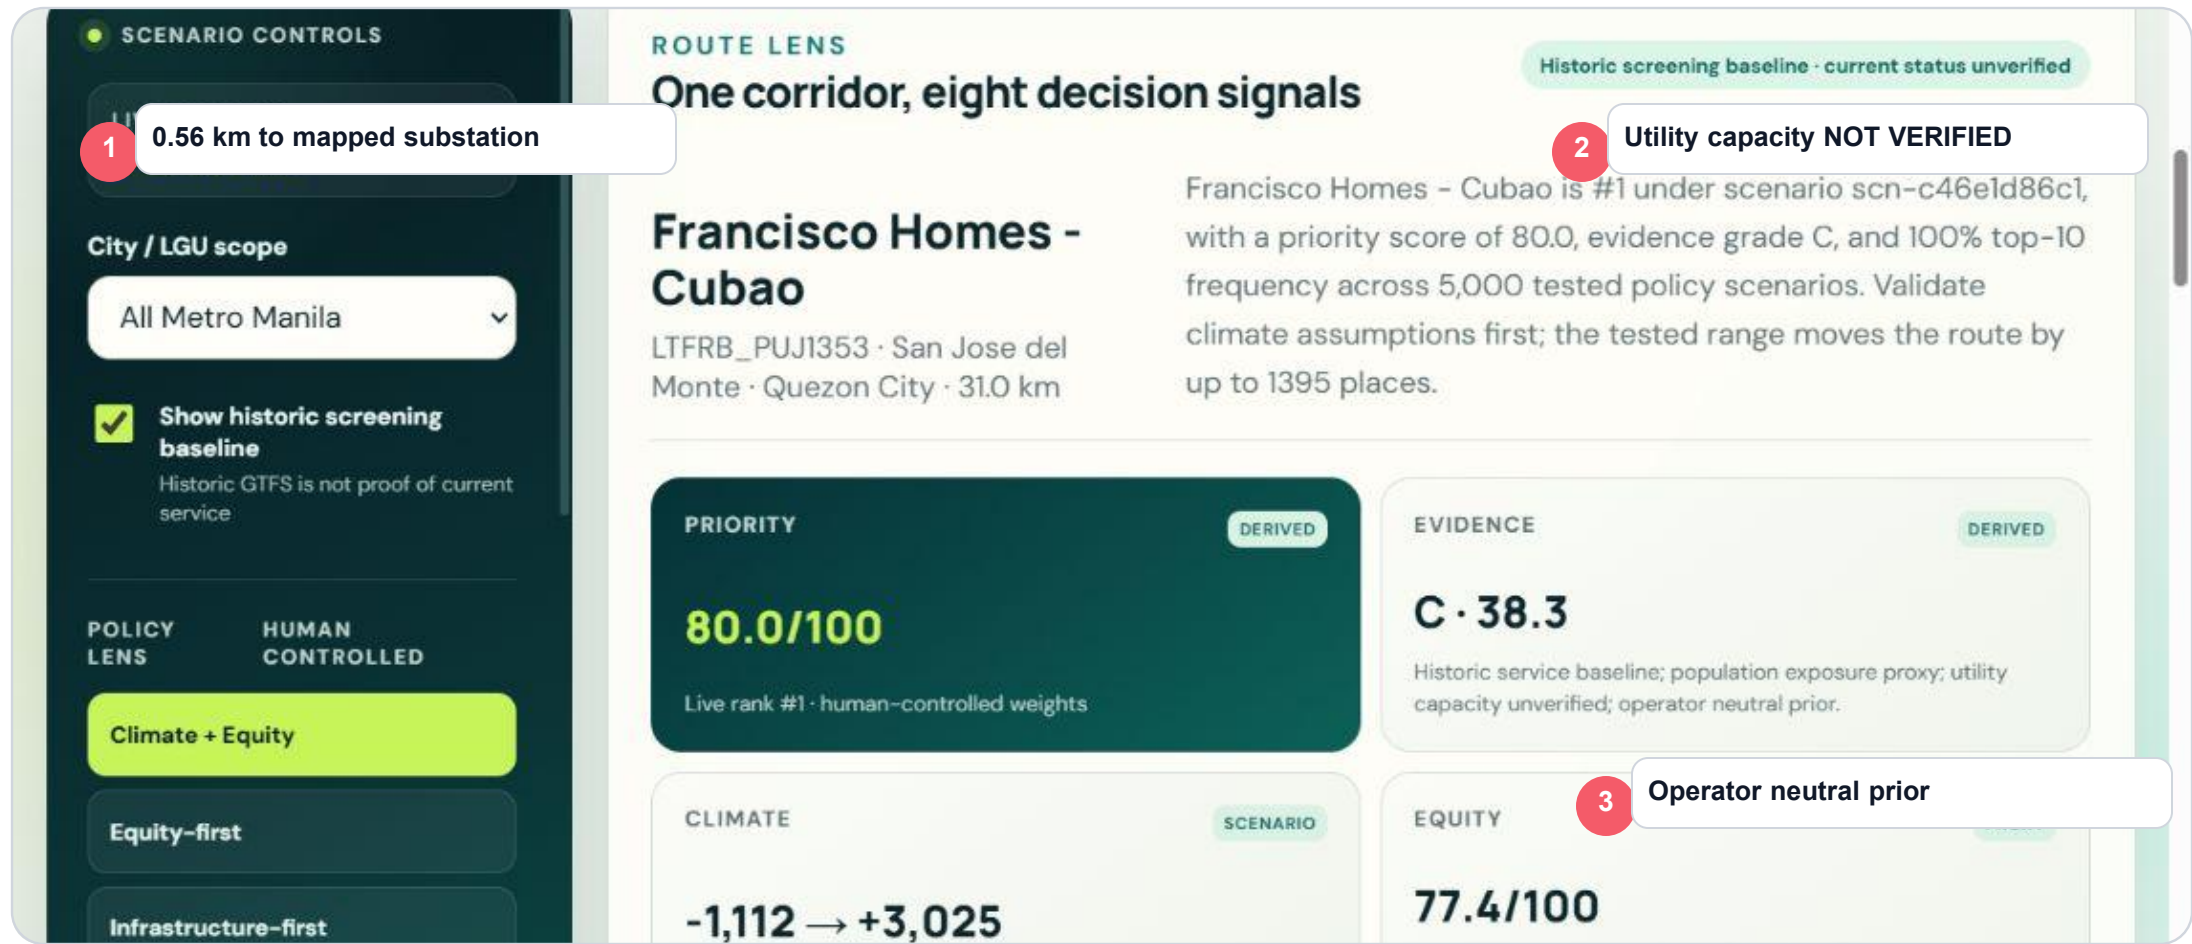

EQUITY + ACCESSIBILITY

The climate recommendation is tested against who and where it serves.

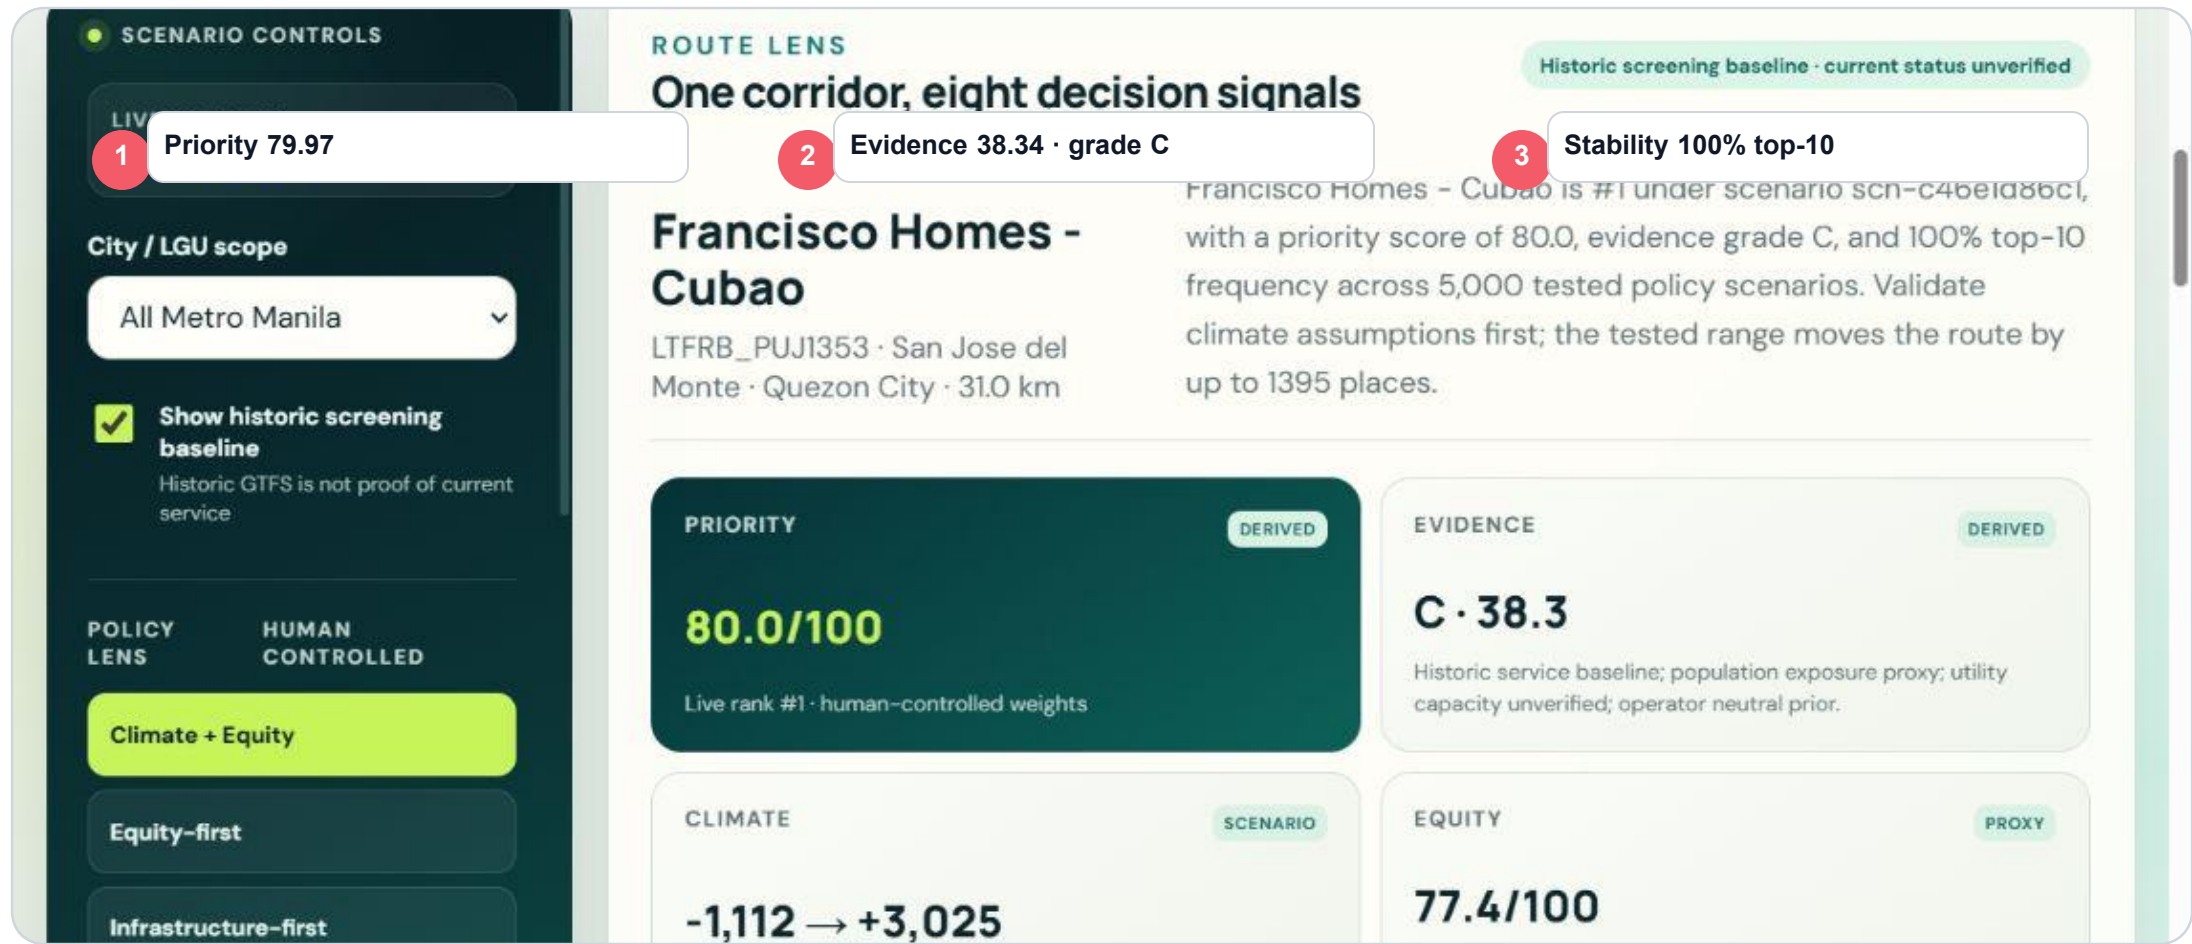

CHARGING + OPERATOR READINESS

Implementation evidence is route-specific.

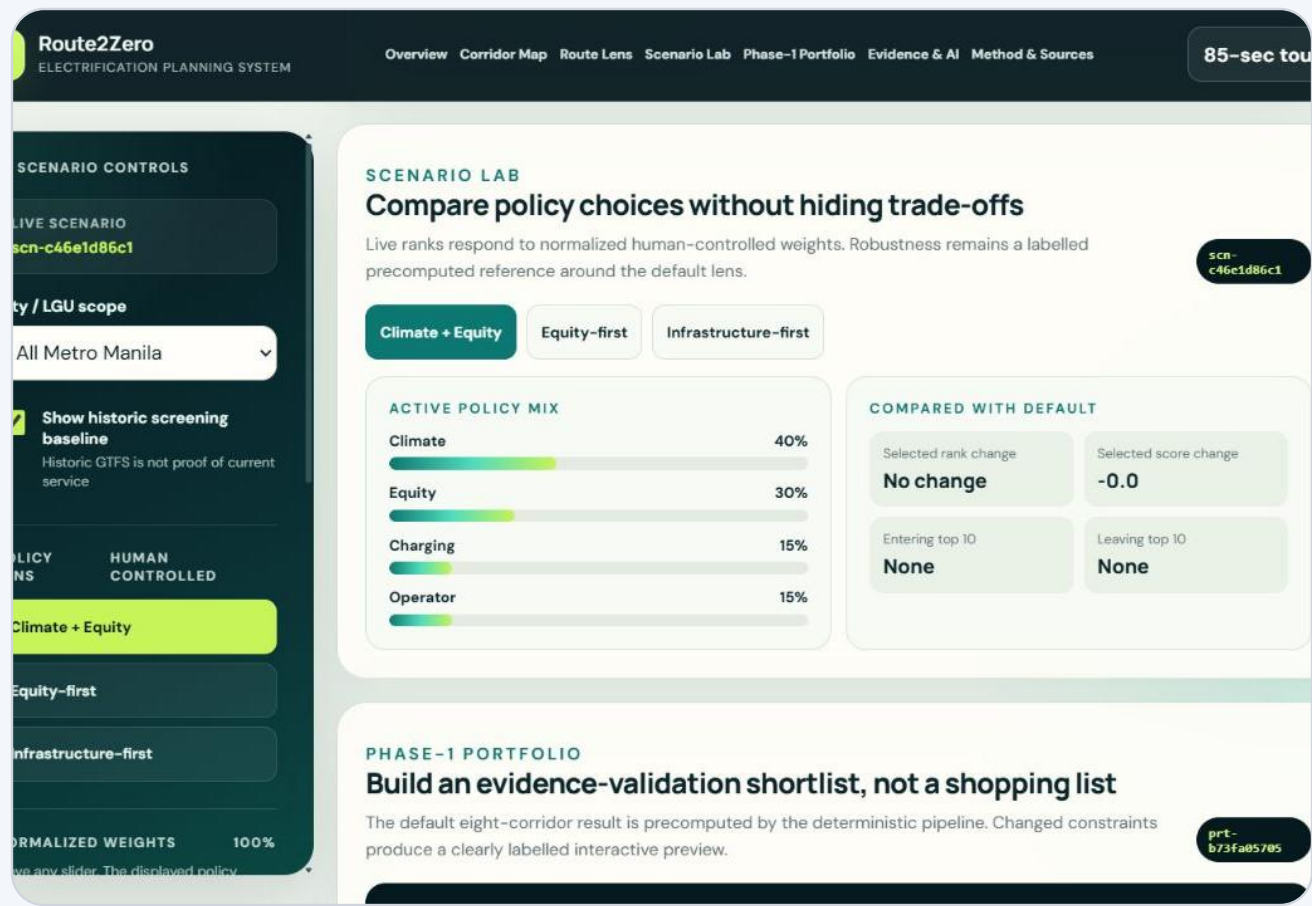

EVIDENCE CONFIDENCE

Priority, evidence quality, and stability are different questions.

5,000-SCENARIO MONTE CARLO

Does the recommendation survive changing policy priorities?

Flagship

VALUE OF INFORMATION

What could change this decision?

The screenshot shows the 'EVIDENCE QUEUE' interface. It features a list of three items, each with a numbered callout box. Item 1 is 'Climate assumptions: rank swing 1,395'. Item 2 is 'Portfolio flip possible'. Item 3 is 'Field validation action'. The interface also includes a 'SCENARIO CONTROLS' sidebar on the left and a 'PLANNING & EVIDENCE ASSISTANT' sidebar on the right.

Item	Callout
01	Climate assumptions: rank swing 1,395
02	Portfolio flip possible
03	Field validation action

SCENARIO COMPARISON

A city can change priorities without hiding the trade-off.

PHASE-1 PORTFOLIO INPUTS

Now move from ranking to a city program.

Francisco Homes -

Dasmarinas Resettlement

3

No hypothetical budget

Why

The pipeline enforces corridor and city diversity instead of simply taking the first eight rows.

OPTIMIZED RESULT

The optimized portfolio is not simply the top eight routes.

SCENARIO CONTROLS

1

Four routes added by constraints

City / LGU scope

SOURCE EVIDENCE → ML → CLIMATE / EQUITY / READINESS → CONFIDENCE → POLICY → SENSITIVITY → PORTFOLIO → VALIDATION

Route2Zero is not asking the city to trust one score. It shows what remains true when assumptions are challenged.
