

Route2Zero 2.1

Prototype Demonstration

Screen 1,522 historic corridor records into 9 priorities for field validation — then show what the city must verify before spending.

BUILD	r2z-a7181752a17d
MODEL	service-v1-266e0b1d

Values shown are generated from the linked build and scenario — not manually entered.

DEMO DECISION

What this demonstration will prove.

Which corridors remain strong when climate, equity, charging, operator evidence, and uncertainty are tested together?

Scenario `scn-e0f12f397e`

SYSTEM OVERVIEW

The final city decision cockpit.

DATED EXTERNAL MAP RECORD

A dated map record shows its source, review date, and observed geometry.

FLAGSHIP ROUTE LENS

Flagship corridor: Francisco Homes–Cubao.

Francisco Homes - Cubao

1 Validation rank

LTFRB_PUJ1353 · San Jose del Monte · Quezon City · 31.0 km

Francisco Homes – Cubao is #1 under scenario scn-e0f12f397e, with a priority score of 79.1, evidence grade C, and 100% top-10 frequency across all scenarios. Validate climate assumptions first; the validated range moves the route by up to 1395 places.

2 Evidence confidence

WHAT CHANGES THIS DECISION?

Highest-value gap: climate assumptions

Current rank

Median

P10–P90

ML SERVICE INTENSITY

The machine-learning layer produces a real route-level estimate.

Historic: MISSING
 ML: 6,657

LTFRB_PUJ2451 is the only route where ML supplies the climate activity input. It is not current service or ridership.

GROUPKFOLD(5)
 NO RANK LEAKAGE

CORRIDOR TYPOLOGY

Typology is a descriptive comparison aid, not a prediction.

CLIMATE + ENERGY

Lead with the base climate case; keep the scenario range beside it.

EQUITY + ACCESSIBILITY

The climate recommendation is tested against who and where it serves.

FEASIBILITY + MODEL RESTRAINT

Feasibility is visible as a proxy — never disguised as a budget.

EVIDENCE CONFIDENCE

Priority, evidence quality, and stability are different questions.

Francisco Homes -
Cubao

1 Priority 79.07

LTFRB_PUJ1353 · San Jose del Monte · Quezon City · 31.0 km

Francisco Homes - Cubao is #1 under scenario scn-e0f12f397e, with a priority score of 79.07. This is the top-10 frequency of scenarios. Validate climate assumptions first, the tested range moves the route by up to 1395 places.

2 Evidence 38.34 · grade C

YOUR PLANNING QUESTION

What evidence should the city request before piloting this route?

Generate evidence brief

SCENARIO COMPARISON

A city can change priorities without hiding the trade-off.

PHASE-1 PORTFOLIO INPUTS

Now move from ranking to a city validation program.

1

Maximum eight corridors

07

Philcoa

San Jose del Monte · Grade C

71.6

08

Bagong Silang – Philcoa via Commonwealth Ave., Maligaya Park

Caloocan · Grade C

70.3

equity and city-coverage constraints

• LTFRB_PUJ2084 · not selected after evidence, equity and city-coverage constraints

2

Evidence and equity constraints

Active constraints

• maximum 8 corridors

• maximum 2 corridors per primary city

• maximum 1 route direction per normalized corridor

• minimum equity score 40

• minimum evidence grade C

CORRIDOR ACTION QUEUE

Top routes under the active policy lens

Select a route to inspect it

RANK	ROUTE	CITY	PRIORITY	EVIDENCE	CLIMATE RANGE	ROBUSTNESS
#1	Francisco Homes – Cubao LTFRB_PUJ1353	San Jose del Monte	79.1	C · 38.3	+365	
#2	Dasmarinas Resettlement Area – Baclaran via Coastal Rd.	Pasay	76.9	C · 38.3	+365-1,104 to +3,004	ROBUST PRIORITY

3

Cost is visible, not optimized

CONSTRAINED RESULT

The constrained portfolio is not simply the top eight routes.

PLANNING & EVIDENCE ASSISTANT

AI explains the evidence and tells the city what to verify next.

REPRODUCIBILITY + CLOSE

The decision can be reproduced, exported, challenged, and rerun.

stays focused while assumptions, provenance and limitations remain one click away.

03
Claims, assumptions and safeguards

ML service intelligence
Predicts historic service activity for anomaly detection and gap analysis; it is not ridership and is not used when the direct historic proxy is available.

Climate scenarios
Low/base/high net CO₂e and energy results are deterministic scenario bounds, not statistical confidence intervals or measured reductions.

Equity
Uses population exposure only. No validated informal-settlement, socioeconomic or accessibility-gap layer is claimed.

Charging
Mapped proximity is contextual evidence, not proof of utility capacity, interconnection or site control.

Operator
The 50/100 value is a constant neutral prior across all routes, not evidence of operator readiness.

Typology
K-means silhouette is 0.373. The groups are descriptive, overlap materially, and contribute no policy points.

Governance
ML estimates. Deterministic models quantify. Policy weights remain human-controlled. The LLM explains and triages evidence; it never silently edits scores or choices.

SOURCE EVIDENCE → ML → CLIMATE / EQUITY / READINESS → CONFIDENCE → POLICY → SENSITIVITY → PORTFOLIO → VALIDATION

Route2Zero is not asking the city to trust one score. It shows what remains true when assumptions are challenged.
